● Vacuum Therapy

A high-revolution axial turbine (15,000 rpm) is used instead of the well-known vacuum pump. This turbine produces a continuous suction at a constant flow, which prevents the skin and tissues from being damaged, achieving better results in fewer sessions. Our treatment offers an effective solution to fight cellulite in all its stages and localized adiposities, remodeling the body and reducing volume. It mobilizes the different skin tissues and stimulates micro-circulation, which generates a lymphatic drainage to eliminate the liquids accumulated in the areas that have been treated.

(45min)

● Multi-Well Effisonic Ultra-Sound

The micro bubbles that are generated are smaller than the ones generated by low frequency cavitation; such bubbles implode due to partial pressure changes and disintegrate the fat cells in localized areas. Fat cells turn into a liquid substance which is eliminated through the lymphatic system and urine. Its high pulsating power and the repetitive cycles generate an ultrasonic intensity on the tissue without affecting the surrounding tissue.
